PROFILE

Full-stack & AI developer with 6 years of experience: React, Node.js, Python, PostgreSQL, Azure. At SoftStars, I build crawlers and AI features (LLMs, vision agents, Azure AI Foundry) that run in production for a major international sports broadcaster. Open to full-time roles (on-site in Tunisia or remote) and freelance projects.

EXPERIENCE

Full-Stack & AI Developer — SoftStars, Tunis, Tunisia — Mar 2025 – Present

Client: a major international sports broadcaster

- Built live and VOD crawlers (Python, Node.js, Puppeteer) that spot pirate streams and collect the evidence behind takedown requests.
- Built the team's web portal (React, Node.js, PostgreSQL): crawl scheduling, result tracking and validation, list imports, reports and user management.
- Put AI at the core of the pipeline: LLM page classification, a vision agent that clicks on video players, and validated structured outputs.
- Moved the AI calls from OpenAI to Azure AI Foundry (Python and Node.js gateway, managed identity, model picked per task) to cut AI spend.
- Run the services on Azure (Container Apps Jobs, Service Bus, Functions, Key Vault, PostgreSQL) with Azure DevOps CI/CD; upgraded them to Node 24 and traced production incidents through SQL and logs.

Full-Stack Developer — Hotlas, Atlanta, USA (remote) — Jun 2022 – Mar 2025

- Built stock management and supplier communication, from the React UI to the Node.js / NestJS APIs.
- Automated document intake: every new PDF is detected automatically and its data mapped straight into the database.
- Wrote automated Cypress tests to make releases safer and catch regressions early.

Full-Stack Developer & Product Owner — SQOIN, Tunis, Tunisia — Mar 2022 – Jun 2022

- Integrated and maintained the payment modules of the coinsence.org platform.

Full-Stack Developer & Trainer — Five Points, Tunis, Tunisia — Oct 2020 – Feb 2022

- Built a mapping tool for Expensya's client files.

Data Analyst — Sentinel Data, Tunis, Tunisia — Apr 2019 – Aug 2020

- Loaded data into Google BigQuery and checked its integrity with SQL.

SELECTED PROJECTS

Stream-Catcher — Automatic detection of pirated live matches and VOD content

A pipeline that finds the pages, classifies them with an LLM, detects the video stream and keeps the evidence (stream URL + screenshot) for the takedown request.

Stack: Python, Node.js, Puppeteer, LLM, Azure AI Foundry, Azure Container Apps, Service Bus, PostgreSQL

Restaurant-bar management app — Freelance project for a client

Bookings (phone, online, regulars), a floor plan by zone, a door-staff screen, orders pushed live to prep stations, role-based access, push notifications (PWA), stats and CSV export.

Stack: React, Vite, TypeScript, Express, Prisma, PostgreSQL, Socket.IO, Jest, Docker, GitHub Actions

SKILLS

Frontend: React, TypeScript, JavaScript, Vite, Tailwind CSS, HTML & CSS
Backend: Node.js, Express, NestJS, Python, Prisma, Socket.IO, REST APIs
AI & LLM: Azure AI Foundry, OpenAI API, Structured outputs, Vision agents, Claude Code
Automation & scraping: Puppeteer, Playwright, Anti-bot handling, HLS/DASH stream capture
Data: PostgreSQL, SQL, MongoDB, BigQuery, Power BI, pandas
Cloud & DevOps: Azure Container Apps, Azure Functions, Service Bus, Key Vault, Docker, Azure DevOps, GitHub Actions, Git
Testing: Jest, Cypress, pytest

EDUCATION & CERTIFICATIONS

Bachelor's degree in Management, Finance major — Tunis Carthage University · 2014 – 2018
CS50 (Computer Science 50) — Harvard University · 2023
React - The Complete Guide — Udemy · 2022
Full-Stack JS Certificate — Five Points · 2020 – 2021
